

Good morning,

We are off with an easy simple assignment to get you back into the school wing (sort of). Here is where we are going and what we will be doing, at this point, until we are able to get back into school.

We will start with Chapter 4 fuel systems and work our way through the textbook and supplemental materials, remember GIGO (garbage in; garbage out). You will get out of it what you put into it; please put some thought into your email replies and assignments. These chapters and articles will help you with lifetime knowledge and skills for your future success in working with your small engines. You will all have a small engine that needs to be taken out of storage, maintained, and winterized.

Assignment due April 3

Reference chapter 4, complete the 12 Review Questions and attached workbook.

Please send the completed assignment to me via and email by Wednesday April 3.

Stay healthy and stay safe,

Mr. Smith

PS – Previously we have communicated through a mix of personal and school emails. We need to migrate to only school for consistency. If you are accessing my information via a personal email, please check and use your school email.
