

Good Morning Physics Students & Families,

I hope you had a great weekend and are doing well. This week we are finishing up our supplemental learning of Momentum by looking at both two-dimensional collisions and angular momentum. To better visualize the material, we are covering this week you will be watching two videos that illustrate both concepts. We will then finish up the week with an assignment that touches on both concepts. The following week we will finish up the supplemental learning with a quiz and then start new instruction after that. Again, continue to check the Canvas page for more updates (video announcements/instructions are dated to help you keep pace). As always, if you have any questions or if you are having trouble accessing material don't be afraid to email me.

Mr. Robaidek
